

1. Let's begin by adding the source, open the System Settings by clicking on the gear button near the top left corner of the screen.

2. Open the File Manager

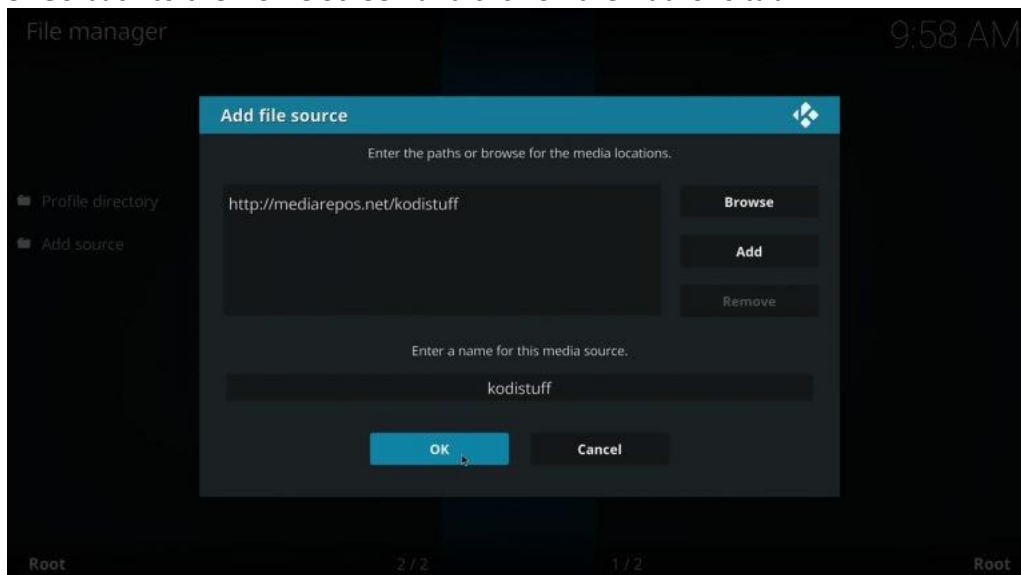

3. Select Add Source

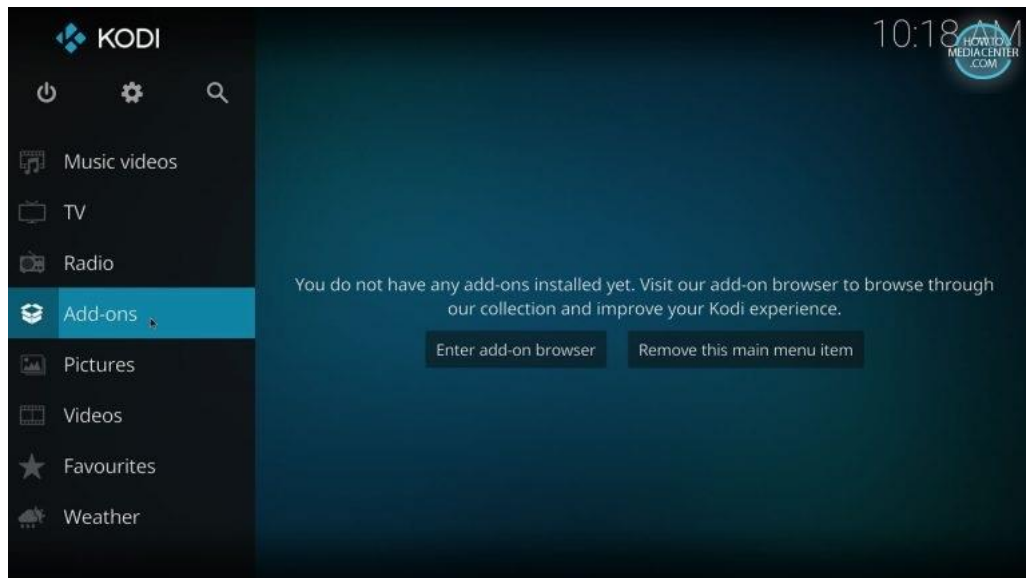

Enter <http://g20.live/repo/> on the top box and G20 on the bottom one, press OK to add the source.

5. Go back to the Home Screen and click on the Add-ons tab.

6. Press the Setting button (gear icon) near the top left corner of the screen.

7. Make sure the Add-ons tab is selected and enable Unknown Sources and Show

8. Go back to the Add-ons screen and this time open Add-on Browser by pressing the box icon on the top left corner of the screen.

9. We are going to install G20 Repo. Select Install from zip filefile.

10. Select G20

11. Click on Gbox-addon.zip to install the repository.

12. Now let's install Gbox. Select Install from repositoryrepository.

from

13. Click on G20 repository to open it.

14. Then Video Add-ons

Add-ons.

15. Select G20

16. Now press Install, this will download and install the addon and its dependencies. Wait until you see the Gbox Addon Enabled notification.

17. Go back to the Home Screen and highlight the Add-ons tab, click on GBox to open the addon.

18. Navigate Gbox Main Menu to watch movies and TV shows.
